

Quantum Mechanics

Mathematical Structure
and
Physical Structure

Part 1

John R. Boccio
Professor of Physics
Swarthmore College

June 15, 2010

Contents

1	Motivation, Motivation, Motivation	1
1.1	Basic Principles and Concepts of Quantum Theory	4
1.1.1	Mathematical Methods	4
1.1.2	Classical Concepts	5
1.1.3	The Fundamental Principle of Quantum Mechanics	6
1.2	Simple Ideas about Probability	10
1.2.1	Discrete Distributions	10
1.2.2	Continuous Distributions	11
1.2.3	Review of Waves and Diffraction	16
1.2.4	Diffraction of Waves	24
1.3	Review of Particle Dynamics	28
1.3.1	Relativistic Dynamics	28
1.4	Wave-Particle Duality of Light	30
1.4.1	Einstein's Photon Hypothesis	32
1.4.2	Wave-Particle Duality of Electrons	35
2	Formulation of Wave Mechanics - Part 1	39
2.1	Basic Theory	39
2.1.1	Postulate 1a	39
2.1.2	Postulate 1b	43
2.1.3	Fourier Series and Transforms and Dirac Delta Function	48
2.1.4	Postulate 2	60
2.1.5	Operator Formalism	64
2.1.6	Heisenberg's Uncertainty Principle	66
2.1.7	Postulate 3a	78
2.1.8	Postulate 3b	81
2.1.9	Important Question	83
2.1.10	Time-Independent Schrodinger Equation	85
2.1.11	Some Operator Eigenvalue/Eigenfunction Equations	85
2.2	Energy Measurements	104
2.3	Collapse	126
2.3.1	Postulate 4: Collapse of the Wave Function	126

3	Formulation of Wave Mechanics - Part 2	135
3.1	Complete Orthonormal Sets	135
3.2	Time Development	144
3.2.1	Mathematical Preliminaries	145
3.2.2	Postulate 5: Time Development of the Wave Function	152
3.3	Structure of Quantum Theory	152
3.3.1	Initial preparation of the wave function at t_0	152
3.3.2	Basic Problem of Quantum Mechanics	153
3.4	Free Particle in One Dimension (motion along the x-axis)	159
3.4.1	The Method of Stationary Phase	161
3.4.2	Application to a Free-Particle Wave Packet	163
3.5	Constants of the Motion	164
3.6	Harmonic Oscillator in One Dimension	167
3.6.1	Differential Equation Method	169
3.6.2	Algebraic Method	177
3.6.3	Use of Raising and Lowering Operators	185
3.7	General Potential Functions	192
3.7.1	Method for Solving this Eigenvalue Equation	193
3.7.2	Symmetrical Potential Well (finite depth)	204
3.8	General One-Dimensional Motion	209
3.8.1	Physical Significance of form of $\psi(x, t)$	217
3.8.2	General Comments	225
3.9	The Symmetrical Finite Potential Well	227
3.10	The Complex Energy Plane	230
3.11	Problems	234
3.11.1	Free Particle in One-Dimension - Wave Functions	234
3.11.2	Free Particle in One-Dimension - Expectation Values	234
3.11.3	Time Dependence	235
3.11.4	Continuous Probability	235
3.11.5	Square Wave Packet	235
3.11.6	Uncertain Dart	236
3.11.7	Find the Potential and the Energy	236
3.11.8	Harmonic Oscillator wave Function	236
3.11.9	Spreading of a Wave Packet	236
3.11.10	The Uncertainty Principle says	237
3.11.11	Free Particle Schrodinger Equation	237
3.11.12	Double Pinhole Experiment	238
4	The Mathematics of Quantum Physics:	
	Dirac Language	241
4.1	Mappings	242
4.2	Linear Vector Spaces	242
4.3	Linear Spaces and Linear Functionals	243
4.4	Inner Products	250
4.5	Linear Functionals	252
4.6	The Dirac language of Kets and Bras	254

4.7	Gram-Schmidt Orthogonalization Process	255
4.8	Linear Operators	257
4.9	An Aside : The Connection to Matrices	258
4.10	More about Vectors, Linear Functionals, Operators	259
4.11	Self-Adjoint Operators	264
4.12	Eigenvalues and Eigenvectors	265
4.13	Completeness	267
4.14	Expand Our Knowledge - Selected Topics	268
4.14.1	Hilbert Space	268
4.14.2	Bounded Operators	270
4.14.3	Inverses	271
4.14.4	Unitary Operators	272
4.14.5	More on Matrix Representations	272
4.14.6	Projection Operators	274
4.14.7	Unbounded Operators	276
4.15	Eigenvalues and Eigenvectors of Unitary Operators	276
4.16	Eigenvalue Decomposition	277
4.17	Extension to Infinite-Dimensional Spaces	277
4.18	Spectral Decomposition - More Details	288
4.19	Functions of Operators (general case); Stones Theorem	300
4.20	Commuting Operators	306
4.21	Another Continuous Spectrum Operator	312
4.22	Problems	317
4.22.1	Simple Basis Vectors	317
4.22.2	Eigenvalues and Eigenvectors	318
4.22.3	Orthogonal Basis Vectors	318
4.22.4	Operator Matrix Representation	318
4.22.5	Matrix Representation and Expectation Value	318
4.22.6	Projection Operator Representation	319
4.22.7	Operator Algebra	319
4.22.8	Functions of Operators	319
4.22.9	A Symmetric Matrix	319
4.22.10	Determinants and Traces	319
4.22.11	Function of a Matrix	319
4.22.12	More Gram-Schmidt	320
4.22.13	Infinite Dimensions	320
4.22.14	Spectral Decomposition	320
4.22.15	Measurement Results	320
4.22.16	Expectation Values	321
4.22.17	Eigenket Properties	321
4.22.18	The World of Hard/Soft Particles	321
4.22.19	Things in Hilbert Space	322
4.22.20	A 2-Dimensional Hilbert Space	322
4.22.21	Find the Eigenvalues	323
4.22.22	Operator Properties	323
4.22.23	Ehrenfest's Relations	324

4.22.24	Solution of Coupled Linear ODEs	324
4.22.25	Spectral Decomposition Practice	324
4.22.26	More on Projection Operators	324
5	Probability	327
5.1	Probability Concepts	327
5.1.1	Standard Thinking	327
5.1.2	Bayesian Thinking	331
5.2	Probability Interpretation	335
5.3	First hints of "subversive" or "Bayesian" thinking.....	338
5.3.1	The Problem of Prior Probabilities	344
5.4	Testable Information: The Principle of Maximum Entropy	348
5.5	Discussion	356
5.6	Problems	357
5.6.1	Simple Probability Concepts	357
5.6.2	Playing Cards	359
5.6.3	Birthdays	359
5.6.4	Is there life?	359
5.6.5	Law of large Numbers	359
5.6.6	Bayes	360
5.6.7	Psychological Tests	360
5.6.8	Bayes Rules, Gaussians and Learning	360
5.6.9	Berger's Burgers-Maximum Entropy Ideas	361
5.6.10	Extended Menu at Berger's Burgers	363
5.6.11	The Poisson Probability Distribution	363
5.6.12	Modeling Dice: Observables and Expectation Values . . .	364
5.6.13	Conditional Probabilities for Dice	365
5.6.14	Matrix Observables for Classical Probability	365
6	The Formulation of Quantum Mechanics	367
6.1	Introduction	367
6.2	Two Postulates: Presentation, Rationalization and Meaning	368
6.3	States and Probabilities	373
6.3.1	States	373
6.3.2	Probabilities	376
6.4	Quantum Pictures	382
6.5	Transformations of States and Observables The way it must be.....	383
6.5.1	Antiunitary/Antilinear Operators	384
6.5.2	Wigners Theorem	384
6.5.3	The Transformation Operator and its Generator	385
6.6	The Schrodinger Picture	387
6.7	The Heisenberg Picture	391

6.8	Interaction Picture	393
6.9	Symmetries of Space-Time	394
6.10	Generators of the Group Transformations	396
6.11	Commutators and Identities	399
6.12	Identification of Operators with Observables	404
6.13	Multiparticle Systems	417
6.14	Equations of Motion Revisited and Finished	424
6.15	Symmetries, Conservation Laws and Stationary States	427
6.16	The Collapse or Reduction Postulate?	430
6.17	Putting Some of These Ideas Together	436
6.17.1	Composite Quantum Systems; Tensor Product	436
6.17.2	Quantum Entanglement and the EPR <i>Paradox</i>	443
6.17.3	Entanglement and Communication	447
6.17.4	Nonlocality and Tests of Quantum Entanglement	449
6.18	Expanding on the Density Operator and the Statistical Description of Quantum Systems	453
6.18.1	Statistical Description of Quantum Systems and the Nonexistence of an Averaged Quantum State	453
6.18.2	Open Quantum Systems and the Reduced Density Operator	457
6.19	Problems	459
6.19.1	Can It Be Written?	459
6.19.2	Pure and Nonpure States	459
6.19.3	Probabilities	459
6.19.4	Acceptable Density Operators	460
6.19.5	Is it a Density Matrix?	460
6.19.6	Unitary Operators	460
6.19.7	More Density Matrices	461
6.19.8	Scale Transformation	461
6.19.9	Operator Properties	461
6.19.10	An Instantaneous Boost	462
6.19.11	A Very Useful Identity	462
6.19.12	A Very Useful Identity with some help....	462
6.19.13	Another Very Useful Identity	463
6.19.14	Pure to Nonpure?	463
6.19.15	Schur's Lemma	463
6.19.16	More About the Density Operator	464
6.19.17	Entanglement and the Purity of a Reduced Density Operator	464
6.19.18	The Controlled-Not Operator	465
6.19.19	Creating Entanglement via Unitary Evolution	465
6.19.20	Tensor-Product Bases	465
6.19.21	Matrix Representations	466
6.19.22	Practice with Dirac Language for Joint Systems	466
6.19.23	More Mixed States	467
6.19.24	Complete Sets of Commuting Observables	468
6.19.25	Conserved Quantum Numbers	468

7 How Does It really Work:

Photons, K-Mesons and Stern-Gerlach 469

7.1	Introduction	469
7.1.1	Photon Interference	476
7.2	Photon Polarization	481
7.2.1	How Many Basis Sets ?	484
7.2.2	Projection Operators	491
7.2.3	Amplitudes and Probabilities	492
7.2.4	Pure States, Unpure States and Density Operators	496
7.2.5	Unpolarized Light	498
7.2.6	How Does the Polarization State Vector Change?	499
7.2.7	Calculating the Transition Probability	503
7.2.8	Some More Bayesian Thoughts	504
7.3	The Strange World of Neutral K-Mesons	507
7.4	Stern-Gerlach Experiments and Measurement	516
7.5	Problems	527
7.5.1	Change the Basis	527
7.5.2	Polaroids	527
7.5.3	Calcite Crystal	528
7.5.4	Turpentine	528
7.5.5	What QM is all about - Two Views	528
7.5.6	Photons and Polarizers	529
7.5.7	Time Evolution	529
7.5.8	K-Meson oscillations	530
7.5.9	What comes out?	530
7.5.10	Orientations	531
7.5.11	Find the phase angle	531
7.5.12	Quarter-wave plate	532
7.5.13	What is happening?	532
7.5.14	Interference	532
7.5.15	More Interference	533
7.5.16	The Mach-Zender Interferometer and Quantum Interference	534
7.5.17	More Mach-Zender	535

8 Schrodinger Wave equation

1-Dimensional Quantum Systems 537

8.1	The Coordinate Representation	537
8.2	The Free Particle and Wave Packets	544
8.3	Derivation of the Uncertainty Relations in General	548
8.3.1	The Meaning of the Indeterminacy Relations	550
8.3.2	Time-Energy Uncertainty Relations	551
8.4	The Wave Function and Its Meaning	553
8.5	One-Dimensional Systems	557
8.5.1	One-Dimensional Barrier	559

8.5.2	Tunneling	567
8.5.3	Bound States	570
8.5.4	Delta-Function Potentials	584
8.6	Harmonic Oscillators	591
8.6.1	Differential Equation Method	592
8.6.2	Algebraic Method	597
8.7	Greens Functions	606
8.8	Charged Particles in Electromagnetic Fields	612
8.9	Time Evolution of Probabilities	618
8.10	Numerical Techniques	622
8.11	Translation Invariant Potential - Bands	627
8.12	Closed Commutator Algebras and Glaubers Theorem	631
8.13	Quantum Interference with Slits	633
8.13.1	Introduction	633
8.13.2	Probability functions and quantum interference	635
8.13.3	Scattering from a narrow slit	636
8.13.4	Scattering from a double slit(narrow)	637
8.13.5	Scattering from a slit of finite width	638
8.13.6	Scattering from a double finite-width slit	639
8.13.7	Conclusions	641
8.14	Algebraic Methods - Supersymmetric Quantum Mechanics	642
8.14.1	Generalized Ladder Operators	642
8.14.2	Examples	648
8.14.3	Generalizations	650
8.14.4	Examples	653
8.14.5	Supersymmetric Quantum Mechanics	661
8.14.6	Additional Thoughts	663
8.15	Problems	663
8.15.1	Delta function in a well	663
8.15.2	Properties of the wave function	664
8.15.3	Repulsive Potential	664
8.15.4	Step and Delta Functions	665
8.15.5	Atomic Model	665
8.15.6	A confined particle	666
8.15.7	$1/x$ potential	666
8.15.8	Using the commutator	666
8.15.9	Matrix Elements for Harmonic Oscillator	667
8.15.10	A matrix element	667
8.15.11	Correlation function	667
8.15.12	Instantaneous Force	667
8.15.13	Coherent States	667
8.15.14	Oscillator with Delta Function	668
8.15.15	Measurement on a Particle in a Box	669
8.15.16	Aharonov-Bohm experiment	669
8.15.17	A Josephson Junction	670
8.15.18	Eigenstates using Coherent States	672

8.15.19	Bogliubov Transformation	672
8.15.20	Harmonic oscillator	672
8.15.21	Another oscillator	673
8.15.22	The coherent state	673
8.15.23	Neutrino Oscillations	674
8.15.24	Generating Function	675
8.15.25	Given the wave function	675
8.15.26	What is the oscillator doing?	676
8.15.27	Coupled oscillators	676
8.15.28	Interesting operators	676
8.15.29	What is the state?	677
8.15.30	Things about particle in box	677
8.15.31	Handling arbitrary barriers.....	677
8.15.32	Deuteron model	679
8.15.33	Use Matrix Methods	679
8.15.34	Finite Square Well Encore	680
8.15.35	Half-Infinite Half-Finite Square Well Encore	681
8.15.36	Nuclear α Decay	682
8.15.37	One Particle, Two Boxes	683
8.15.38	A half-infinite/half-leaky box	685
8.15.39	Neutrino Oscillations Redux	686
8.15.40	Is it in the ground state?	686
8.15.41	Some Thoughts on T-Violation	687
8.15.42	Kronig-Penney Model	688
8.15.43	Operator Moments and Uncertainty	688
8.15.44	Uncertainty and Dynamics	689
9	Angular Momentum; 2- and 3-Dimensions	691
9.1	Angular Momentum Eigenvalues and Eigenvectors	691
9.1.1	Derivation of Eigenvalues	693
9.2	Transformations and Generators; Spherical Harmonics	697
9.2.1	Eigenfunctions; Eigenvalues; Position Representation	702
9.3	Spin	705
9.3.1	Spin 1/2	706
9.3.2	Superselection Rules	715
9.3.3	A Box with 2 Sides	718
9.4	Magnetic Resonance	722
9.4.1	Spin Resonance	727
9.5	Addition of Angular Momentum	731
9.5.1	Addition of Two Spin = 1/2 Angular Momenta	731
9.5.2	General Addition of Two Angular Momenta	736
9.5.3	Actual Construction of States	740
9.6	Two- and Three-Dimensional Systems	743
9.6.1	2- and 3-Dimensional Infinite Wells	744
9.6.2	Two-Dimensional Infinite Circular Well	747

9.6.3	3-Dimensional Finite Well	753
9.6.4	Two-Dimensional Harmonic Oscillator	756
9.6.5	What happens in 3 dimensions?	764
9.6.6	Two-Dimensional Finite Circular Well	765
9.6.7	The 3-Dimensional Delta Function	767
9.6.8	The Hydrogen Atom	770
9.6.9	Algebraic Solution of the Hydrogen Atom	775
9.6.10	The Deuteron	778
9.6.11	The Deuteron - Another Way	781
9.6.12	Linear Potential	782
9.6.13	Modified Linear Potential and Quark Bound States	785
9.7	Problems	787
9.7.1	Position representation wave function	787
9.7.2	Operator identities	787
9.7.3	More operator identities	787
9.7.4	On a circle	788
9.7.5	Rigid rotator	788
9.7.6	A Wave Function	788
9.7.7	$L = 1$ System	788
9.7.8	A Spin-3/2 Particle	789
9.7.9	Arbitrary directions	790
9.7.10	Spin state probabilities	791
9.7.11	A spin operator	791
9.7.12	Simultaneous Measurement	791
9.7.13	Vector Operator	792
9.7.14	Addition of Angular Momentum	792
9.7.15	Spin = 1 system	792
9.7.16	Deuterium Atom	793
9.7.17	Spherical Harmonics	793
9.7.18	Spin in Magnetic Field	794
9.7.19	What happens in the Stern-Gerlach box?	794
9.7.20	Spin = 1 particle in a magnetic field	794
9.7.21	Multiple magnetic fields	794
9.7.22	Neutron interferometer	795
9.7.23	Magnetic Resonance	796
9.7.24	More addition of angular momentum	796

10.9.8	A Relativistic Correction for Harmonic Oscillator	903
10.9.9	Degenerate perturbation theory on a spin = 1 system	904
10.9.10	Perturbation Theory in Two-Dimensional Hilbert Space	904
10.9.11	Finite Spatial Extent of the Nucleus	905
10.9.12	Spin-Oscillator Coupling	905
10.9.13	Motion in spin-dependent traps	906
10.9.14	Perturbed Oscillator	907
10.9.15	Another Perturbed Oscillator	907
10.9.16	Helium from Hydrogen - 2 Methods	907
10.9.17	Hydrogen atom + xy perturbation	908
10.9.18	Rigid rotator in a magnetic field	908
10.9.19	Another rigid rotator in an electric field	908
10.9.20	A Perturbation with 2 Spins	908
10.9.21	Another Perturbation with 2 Spins	909
10.9.22	Spherical cavity with electric and magnetic fields	909
10.9.23	Hydrogen in electric and magnetic fields	909
10.9.24	$n = 3$ Stark effect in Hydrogen	909
10.9.25	Perturbation of the $n = 3$ level in Hydrogen - Spin-Orbit and Magnetic Field corrections	909
10.9.26	Stark Shift in Hydrogen with Fine Structure	910
10.9.27	2-Particle Ground State Energy	911
10.9.28	1s2s Helium Energies	911
10.9.29	Hyperfine Interaction in the Hydrogen Atom	911

10.9.30 Dipole Matrix Elements	912
10.9.31 Variational Method 1	912
10.9.32 Variational Method 2	914
10.9.33 Variational Method 3	914
10.9.34 Variational Method 4	914
10.9.35 Variation on a linear potential	914
10.9.36 Average Perturbation is Zero	915
10.9.37 3-dimensional oscillator and spin interaction	915
10.9.38 Interacting with the Surface of Liquid Helium	915
10.9.39 Positronium + Hyperfine Interaction	916
10.9.40 Two coupled spins	916
10.9.41 Perturbed Linear Potential	917
10.9.42 The ac-Stark Effect	917
10.9.43 Light-shift for multilevel atoms	919
10.9.44 A Variational Calculation	921
10.9.45 Hyperfine Interaction Redux	921
10.9.46 Find a Variational Trial Function	922
10.9.47 Hydrogen Corrections on 2s and 2p Levels	922
10.9.48 Hyperfine Interaction Again	923
10.9.49 A Perturbation Example	923
10.9.50 More Perturbation Practice	923
